U.S. Department of Energy
Washington, DC 20585

June 2026

The U.S. Energy Information Administration (EIA), the statistical and analytical agency within the U.S. Department of Energy (DOE), prepared this report. By law, our data, analyses, and forecasts are independent of approval by any other officer or employee of the U.S. Government. The views in this report do not represent those of DOE or any other federal agencies.

Table of Contents

Summary 1

Data Request 2

1. An analysis of Iran's exports and sale of petroleum and petroleum products 2

a. An estimate of Iran's petroleum export and sale revenue per year since 2018 2

b. An estimate of Iran's petroleum export and sale revenue to China per year since 2018 2

c. The amount of petroleum and crude oil barrels exported per year since 2018 2

d. The amount of petroleum and crude oil barrels exported to China per year since 2018 2

e. The amount of petroleum and crude oil barrels exported to countries other than China per year since 2018 3

f. The average price per petroleum and crude oil barrel exported per year since 2018 3

g. The average price per petroleum and crude oil barrel exported to China per year since 2018 4

2. Iran's labeling practices of exported petroleum and petroleum products 4

3. A description of companies involved in the exporting and sale of Iranian petroleum and petroleum products 4

4. A description of ships involved in the exporting and sale of Iranian petroleum and petroleum products 4

5. A description of ports involved in the exporting and sale of Iranian petroleum and petroleum products 4

Appendix A. Section 4 of the SHIP Act (22 U.S.C. § 8573) 5

Appendix B. Ships Involved in the Exporting and Sale of Iranian Crude Oil 6

Appendix C. Ships Involved in the Exporting and Sale of Iranian Petroleum and Petroleum Products 14

Appendix D. Ports Involved in the Exporting and Sale of Iranian Crude Oil 26

Appendix E. Ports Involved in the Exporting and Sale of Iranian Petroleum Products 28

Appendix F. Vessel Definitions for Iranian Shipment of Crude Oil and Petroleum Products 32

Summary

The U.S. Energy Information Administration (EIA) prepared this report to fulfill section 4 of the Stop Harboring Iranian Petroleum Act, or the SHIP Act, enacted on April 24, 2024 (see Appendix A).[1] The act requires that no later than 120 days from the enactment date, and annually thereafter, the Administrator of EIA submit a report describing "Iran's growing exports of petroleum and petroleum products" to the appropriate congressional committees. The act details 11 elements to be included in the report, including information on Iran's export and sale of petroleum and petroleum products, Iran's labeling practices of exported petroleum and petroleum products, and companies, ships, and ports involved in the export and sale of Iran's petroleum and petroleum products.

EIA will provide annual supplements to this report every year until termination of the SHIP Act. The unclassified portions of the report are posted on our website. EIA is also required to submit a classified report no later than 120 days from the enactment date and each year thereafter. The classified annex transmitted separately from this report addresses classified data and was developed in consultation with the intelligence community.

The initial report was published in October 2024. This is the 2026 annual supplement.

This report and information contained in it come with significant caveats. EIA does not have the legislative authority to collect the data requested by the SHIP Act. As a result, most of the data and information included in the report come from third-party sources. The report references commercial data sources in whose estimates we have confidence. When available, we include multiple sources for a data element to provide a range of estimates.

Because of limited availability and transparency of information on Iranian oil exports, nearly all petroleum and petroleum product data presented in this report are estimates rather than actual data. For example, petroleum products are generally shipped on smaller vessels, which can avoid detection more easily than crude oil cargoes transported in large vessels. Iran also uses techniques designed to obfuscate the origin and destination of vessels, creating further uncertainty. For example, vessel operators may turn off ship identification signals, perform illicit ship-to-ship transfers, or relabel crude oil and product cargoes as originating from countries other than Iran. Further, the requested data are typically provided as annual or monthly data series, which are frequently available at a lag.

Although oil price data are widely available for many countries on a real-time or near-real-time basis, pricing data on sales of Iranian crude oil are opaque, requiring that we estimate revenues based on reasonable assumptions and using proxy values.

This report presents data, where available, in the order in which it was requested as part of the SHIP Act beginning in 2018, as outlined in the request, and covering a period up to the most recently available annual data at the time of publication.

Data Request

1. An analysis of Iran's exports and sale of petroleum and petroleum products

All the data and analysis provided regarding Iranian exports and revenues are estimated because of limited data on and visibility into the trade and sales of Iranian volumes of petroleum and petroleum products. Where available, we have highlighted any assumptions and calculations underlying our estimates, as well as the data sources used. In cases where the data or information are simply not available for EIA to estimate, we have stated our inability to provide the information requested.

a. An estimate of Iran's petroleum export and sale revenue per year since 2018

EIA no longer has access to Iranian petroleum products data, so our estimate of export revenues includes only crude oil and condensate exports. To estimate revenues, we multiplied export volumes of Iran's different crude streams by their respective prices and then summed. Individual crude oil and condensate export volumes are sourced from Energy Intelligence[2] through 2024. The revenues do not include discounts. Details on the methodology change can be found in the appendix to our 2025 report.[3]

Table 1. Revenue from Iran's crude oil and condensate exports and sales

nominal billion dollars

Data source	2018	2019	2020	2021	2022	2023	2024	2025
EIA estimate [a,b]	$51	$11	$5	$19	$38	$43	$49	$48

[a] The prices we used to estimate revenues are from OPEC's Annual and Monthly Statistical Bulletins and Argus Media, which do not include discounts.
[b] We assume only crude oil prices and total oil volumes in estimating revenues.

b. An estimate of Iran's petroleum export and sale revenue to China per year since 2018

We do not have information on prices Iran charged to Chinese crude oil purchasers, which media reports suggest are mostly small independent refineries.[4]

c. The amount of petroleum and crude oil barrels exported per year since 2018

We do not have reliable data on the annual volume of Iran's exports of petroleum products since 2018. Estimated volumes of crude oil and condensate exports are in Table 2.

Table 2. Crude oil and condensate exports from Iran, 2018–2025

thousand barrels per day

Data source	2018	2019	2020	2021	2022	2023	2024	2025
Vortexa estimate	1,976	651	343	808	923	1,276	1,445	1,576

Source: Vortexa Analytics tanker tracker (accessed March 2026).

d. The amount of petroleum and crude oil barrels exported to China per year since 2018

We do not have reliable data on the total petroleum product export volumes from Iran to China.

[2] Energy Intelligence, World Crude Oil Data
[3] U.S. Energy Information Administration, Report on Iranian Petroleum and Petroleum Product Exports (August 2025)
[4] https://www.reuters.com/business/energy/chinas-heavy-reliance-iranian-oil-imports-2026-03-21/

Estimates of crude oil barrels (including condensate) exported from Iran to China are provided by Vortexa Analytics.

Most of these export volumes have destinations listed as China, but in some cases the destinations are listed as unknown. For data from 2020 onwards, after U.S. sanctions on Iran's oil exports were fully reapplied, we assess that export volumes to unknown destinations and to countries in Southeast Asia (specifically Malaysia, Singapore, and Vietnam) were likely destined for China.[5]

Table 3. Crude oil and condensate exports from Iran to China, 2018–2025

thousand barrels per day

Data source	2018	2019	2020	2021	2022	2023	2024	2025
Vortexa Estimate	609	315	287	658	757	1,124	1,384	1,567

Source: Vortexa Analytics tanker tracker (accessed March 2026).

e. The amount of petroleum and crude oil barrels exported to countries other than China per year since 2018

We do not have reliable data on the annual volume of Iran's exports of petroleum product to countries other than China.

For crude oil and condensate volumes exported to countries other than China, our values are simply the difference between the volumes provided in Sections 1(c) and 1(d) of this report (Table 4). The same assumptions and caveats noted above apply for these estimates.

Vortexa Analytics confirmed that the volumes to countries other than China listed in Table 4 include shipments to Syria, the United Arab Emirates, Brunei, Bangladesh, Russia, and Venezuela.

Table 4. Crude oil and condensate exports from Iran to destinations outside of China, 2018–2025

thousand barrels per day

Data source	2018	2019	2020	2021	2022	2023	2024	2025
Vortexa estimate	1,367	337	56	151	166	151	60	9

Source: Vortexa Analytics tanker tracker (accessed March 2026).

f. The average price per petroleum and crude oil barrel exported per year since 2018

We do not have reliable data on the average price per barrel of crude oil, condensates, and petroleum products exported from Iran that importers of Iranian cargoes have paid for those volumes. However, trade press have on occasion reported information on Iranian oil discounts, including the $8-$10 discount from Brent crude oil for Iranian Light reported in January 2026. The barter and swap agreements that Iran had in place with some of its trading partners such as Venezuela and Syria creates additional uncertainty regarding how much Iran received for the cargoes.[6, 7]

[5] In November 2018, the United States officially reimposed all sanctions that were lifted under the 2015 Joint Comprehensive Plan of Action. After a six-month waiver expired in May 2019, Iran was subject to complete sanctions on oil exports. Vortexa Analytics confirmed volumes exported between 2020 and 2025 destined for Malaysia, Singapore, and Vietnam were likely ultimately bound for China.

[7] https://www.reuters.com/article/world/syria-ratifies-fresh-1-billion-credit-line-from-iran-idUSKCN0PI1RD/

g. The average price per petroleum and crude oil barrel exported to China per year since 2018

We do not have data on the average price per barrel of crude oil, condensates, and petroleum products exported to China.

2. Iran's labeling practices of exported petroleum and petroleum products

We do not have any source for this information.

3. A description of companies involved in the exporting and sale of Iranian petroleum and petroleum products

We do not have any source for this information.

4. A description of ships involved in the exporting and sale of Iranian petroleum and petroleum products

Ships associated with crude oil exports are listed in Appendix B, and those associated with petroleum product exports are in Appendix C. These lists may be incomplete because of attempts by vessel operators that carry Iranian oil to obfuscate their activities.[8]

The vessel types listed in Appendix B and Appendix C are defined in Appendix F.

5. A description of ports involved in the exporting and sale of Iranian petroleum and petroleum products

Similar to the previous data request item (item 4), we list a destination port for every shipment in the dataset associated with crude oil exports (Appendix D) and petroleum product exports (Appendix E). These data do not include any port or description for those shipments sent to unknown destinations (which we assume were ultimately destined for China). As above, the data may not include a complete list of ports involved in the trade of Iranian crude oil and petroleum products.

Appendix A. Section 4 of the SHIP Act (22 U.S.C. § 8573)

SEC. 4. REPORT ON IRANIAN PETROLEUM AND PETROLEUM PRODUCTS EXPORTS.

(a) In General.—Not later than 120 days after the date of enactment of this Act, and annually thereafter until the date described in subsection (d), the Administrator of the Energy Information Administration shall submit to the appropriate congressional committees a report describing Iran's growing exports of petroleum and petroleum products, that includes the following:

(1) An analysis of Iran's exports and sale of petroleum and petroleum products, including—

(A) an estimate of Iran's petroleum export and sale revenue per year since 2018;

(B) an estimate of Iran's petroleum export and sale revenue to China per year since 2018;

(C) the amount of petroleum and crude oil barrels exported per year since 2018;

(D) the amount of petroleum and crude oil barrels exported to China per year since 2018;

(E) the amount of petroleum and crude oil barrels exported to countries other than China per year since 2018;

(F) the average price per petroleum and crude oil barrel exported per year since 2018; and

(G) the average price per petroleum and crude oil barrel exported to China per year since 2018.

(2) An analysis of Iran's labeling practices of exported petroleum and petroleum products.

(3) A description of companies involved in the exporting and sale of Iranian petroleum and petroleum products.

(4) A description of ships involved in the exporting and sale of Iranian petroleum and petroleum products.

(5) A description of ports involved in the exporting and sale of Iranian petroleum and petroleum products.

(b) Form.—The report required by subsection (a) shall be submitted in unclassified form but may include a classified annex.

(c) Publication.—The unclassified portion of the report required by subsection (a) shall be posted on a publicly available website of the Energy Information Administration.

(d) Termination.—The requirement to submit reports under this section shall be terminated on the date on which the President makes the certification described in section 3(f).

Appendix B. Ships Involved in the Exporting and Sale of Iranian Crude Oil

Third-party data are as of March 2026 and will be revised, as necessary, at the next annual release of the SHIP Act report.

Because sanctions on Iran's sale of oil did not fully come into effect until May 2019, this table presents data on ships involved in exporting Iranian crude oil and condensates from 2020 through 2025.

The vessel types listed in this appendix are defined in Appendix F.

Table B1. Ships involved in the exporting and sale of Iranian crude oil and condensates from 2020-2025

Data source: Vortexa Analytics tanker tracker (accessed March 2026)
Notes: Table reflects cargos that departed after sanctions were fully in effect in 2020. Because IMO numbers are the primary identifier for ships in the data source, a vessel's history, voyages, and cargo movements are associated the same IMO even if the name changes. Vessel types are defined in Appendix F.

Appendix C. Ships Involved in the Exporting and Sale of Iranian Petroleum and Petroleum Products

Third-party data are as of March 2026 and will be revised, as necessary, at the next annual release of the SHIP Act report.

While we do not have reliable information on the annual volume of Iran's exports of petroleum products to China since 2018, we included in this table ships associated with trade of products, although this list is likely incomplete.

Because sanctions on Iran's sale of oil did not fully come into effect until May 2019, this table presents data on ships involved in exporting Iranian petroleum products from 2020 through 2025.

The vessel types listed in this appendix are defined in Appendix F.

Table C1. Ships involved in the exporting and sale of Iranian petroleum and petroleum products from 2020-2025

Data source: Vortexa Analytics tanker tracker (accessed March 2026)
Notes: Table reflects cargos that departed after sanctions were fully in effect in 2020. Because IMO numbers are the primary identifier for ships in the data source, a vessel's history, voyages, and cargo movements are associated the same IMO even if the name changes. Vessel types are defined in Appendix F.

Appendix D. Ports Involved in the Exporting and Sale of Iranian Crude Oil

Third-party data are as of March 2026 and will be revised, as necessary, at the next annual release of the SHIP Act report.

Because sanctions on Iran's sale of oil did not fully come into effect until May 2019, this table presents data on ports involved in exporting Iranian crude oil and condensates from 2020 through 2025.

Table D1. Ports involved in the exporting and sale of Iranian crude oil from 2020-2025

Data source: Vortexa Analytics (accessed March 2026)
Note: The list of ports is likely incomplete due to the presence of unidentified ports. Cargoes associated with Malaysia, Singapore, and Vietnam were likely ultimately bound for China.
[a] This represents a contraband cargo seized in 2023 by the U.S. government and re-routed to the United States. *See* https://www.justice.gov/archives/opa/pr/justice-department-announces-first-criminal-resolution-involving-illicit-sale-and-transport.

Appendix E. Ports Involved in the Exporting and Sale of Iranian Petroleum Products

Third-party data are as of March 2026 and will be revised, as necessary, at the next annual release of the SHIP Act report.

Because sanctions on Iran's sale of oil did not fully come into effect until May 2019, this table presents data on ports involved in exporting Iranian petroleum products from 2020 through 2025.

Appendix F. Vessel Definitions for Iranian Shipment of Crude Oil and Petroleum Products

The global crude oil and refined product tanker fleet is typically classified using the Average Freight Rate Assessment (AFRA) system that was established by Royal Dutch Shell and is now overseen by an independent group of shipping brokers.

The AFRA system classifies tanker vessels according to deadweight tonnage, a measure of a ship's capacity to carry cargo. The approximate capacity of a ship in barrels is determined by multiplying 90% of a ship's deadweight tonnage by a barrel-per-metric-ton conversion factor specific to each type of petroleum product and crude oil, the density of which vary by type and grade.

In this report, we use vessel class definitions provided by Vortexa Analytics.

Table F1. Oil tanker class definitions

Vessel class	Deadweight tonnage
Coastal	<9,999
Specialized—Intermediate	10,000–17,999
Specialized—Flexi	18,000–24,999
Handysize	25,000–39,999
MR1	25,000–39,999
Handymax	40,000–54,999
MR2	40,000–54,999
Panamax	55,000–79,999
LR1	55,000–79,999
Aframax	80,000–119,999
LR2	80,000–119,999
Suezmax	120,000–199,999
LR3	120,000–199,999
VLCC	200,000–450,000

Data source: Vortexa Analytics

Table F2. Liquefied petroleum gas vessel class definitions

Vessel class	Capacity cubic meters
SGC—Coasters	<14,999
SGC—Handysize	15,000–24,999
MGC	25,000–49,999
LGC	50,000–69,999
VLGC	70,000–120,000
VLEC	70,000–120,000
