November 10, 2015
Economic growth has a strong impact on oil consumption

Sources: U.S. Energy Information Administration, IHS Global Insight
Changes in expectations of economic growth in can affect oil prices

percent GDP growth in non-OECD countries (annual expectations)

Note: Starting in January of each year, each line shows the expected forecast of GDP growth for the specified calendar year, which tends to move toward the actual realized growth outcome as the year progresses. Expectations continue to evolve into the next calendar year as revised GDP data become available (e.g., 2008 GDP expectations are revised even during 2009).

In OECD countries, price increases have coincided with lower consumption.

Sources: EIA Short Term Energy Outlook, Thomson Reuters

November 10, 2015
Rising oil prices held down global oil consumption growth from 2005-2008, despite high economic growth.

Sources: EIA Short Term Energy Outlook, Thomson Reuters
Changes in non-OPEC production can affect oil prices

Sources: EIA Short Term Energy Outlook, Thomson Reuters

Sources: EIA Short Term Energy Outlook, Thomson Reuters
Non-OPEC supply expectations indicate changes in market sentiment concerning oil supply

Changes in Saudi Arabia crude oil production can affect oil prices

Sources: U.S. Energy Information Administration, Thomson Reuters

November 10, 2015
Unplanned supply disruptions tighten world oil markets and push prices higher

Sources: U.S. Energy Information Administration

Note: OPEC and non-OPEC supply disruptions are measured in million barrels per day.
During 2003-2008, OPEC’s spare production levels were low, limiting its ability to respond to demand and price increases.
The years 2003-2008 experienced periods of very strong economic and oil demand growth, slow supply growth and tight spare capacity.

*World capacity = OPEC capacity plus non-OPEC production
