^a Includes supplemental gaseous fuels that are commingled with natural gas.^b Includes biodiesel blended into distillate fuel oil.^c Hydrocarbon gas liquids, assumed to be propane only.^d Includes fuel ethanol blended into motor gasoline.^e Includes small amounts of petroleum coke and other petroleum products (biofuels product supplied) not shown separately.^f Conventional hydroelectric power. Excludes hydroelectric pumped-storage.^g Wood, wood-derived fuels, and biomass waste.^h Solar thermal and photovoltaic energy. Excludes a small amount of solar thermal energy consumed as heat that is included in the residential sector.ⁱ Electricity sales to ultimate customers.^j Includes a small amount of wind energy consumed by commercial utility-scale facilities. Adjusted for the double-counting of supplemental gaseous fuels, which are included in both natural gas and the other fossil fuels from which they are mostly derived, but should be counted only once in End use and Total.^k Incurred in the generation, transmission, and distribution of electricity plus plant use and unaccounted for electrical system energy losses.

Where shown, (s) = Value less than 0.05 trillion Btu.

Notes: · Totals may not equal sum of components due to independent rounding. · The commercial sector includes commercial combined-heat-and-power (CHP) and commercial electricity-only plants.
