

# Primary Energy Consumption by Source and Sector, 2012

(Quadrillion Btu)

<sup>1</sup> Does not include biofuels that have been blended with petroleum—biofuels are included in "Renewable Energy."

<sup>2</sup> Excludes supplemental gaseous fuels.

<sup>3</sup> Includes less than 0.1 quadrillion Btu of coal coke net imports.

<sup>4</sup> Conventional hydroelectric power, geothermal, solar/photovoltaic, wind, and biomass.

<sup>5</sup> Includes industrial combined-heat-and-power (CHP) and industrial electricity-only plants.

<sup>6</sup> Includes commercial combined-heat-and-power (CHP) and commercial electricity-only plants.

<sup>7</sup> Electricity-only and combined-heat-and-power (CHP) plants whose primary business is to sell electricity, or electricity and heat, to the public. Includes 0.2 quadrillion Btu of electricity net imports not shown under "Source."

Notes: Primary energy in the form that it is first accounted for in a statistical energy balance, before any transformation to secondary or tertiary forms of energy (for example, coal is used to generate electricity). • Sum of components may not equal total due to independent rounding.
