

Table 3. U.S. uranium mills and heap leach facilities by owner, location, capacity, and operating status

Owner	Mill and heap leach ¹ facility name	County, state (existing and planned locations)	Capacity (short tons of ore per day)	Operating status at end of				
				2023	First-quarter 2024	Second-quarter 2024	Third-quarter 2024	Fourth-quarter 2024
Anfield Resources Inc.	Shootaring Canyon Uranium Mill	Garfield, Utah	750	standby	standby	-	-	-
EFR White Mesa LLC	White Mesa Mill	San Juan, Utah	2,000	standby	standby	-	-	-
Energy Fuels Wyoming Inc Kennecott Uranium Company/Wyoming Coal Resource Company	Sheep Mountain Sweetwater Uranium Project	Fremont, Wyoming Sweetwater, Wyoming	725 3,000	undeveloped standby	undeveloped standby	-	-	-
Total capacity			6,475					

¹ Heap leach solutions: The separation, or dissolving-out from mined rock, of the soluble uranium constituents by the natural action of percolating a prepared chemical solution through mounded (heaped) rock material. The mounded material usually contains low-grade mineralized material and/or waste rock produced from open pit or underground mines. The solutions are collected after percolation is completed, and the solutions are processed to recover the valued components.

- = No data reported

Notes: Capacity for the first-quarter of 2024. An operating status of *operating* indicates the mill usually was producing uranium concentrate at the end of the period.

Data source: U.S. Energy Information Administration: Form EIA-851A, Domestic Uranium Production Report (Annual), and Form EIA-851Q, Domestic Uranium Production Report (Quarterly)
