Data Source: U.S. Energy Information Administration, Office of Energy Demand & Integrated Statistics, Form EIA-846, *2022 Manufacturing Energy Consumption Survey*.

Note: Totals may not equal sum of components because of independent rounding. Zeroes do not mean that the energy source is free but that the energy source neither showed up in this sample nor was purchased at all in the same sampled population.

[a] The Bureau of the Census classifies establishments using the 2022 North American Industry Classification System (NAICS).

[b] A *local utility* is an entity that produces and/or delivers a particular energy source (for example, electricity, natural gas, steam) and is legally obligated to provide service to the public within its franchise area.

[c] *Sources other than local utility* include independent producers, brokers, marketers, and marketing subsidiaries of utilities; for the case of electricity sources, also include small power producers and co-generators not located at the establishment site.

[d] Hydrocarbon gas liquids (HGLs) include ethane, ethylene, propane, propylene, normal butane, butylene, ethane-propane mixtures, propane-butane mixtures, and isobutane produced at refineries or natural gas processing plants, including plants that fractionate raw natural gas liquids.

[e] Four components of *biomass* are collected: agricultural waste, wood harvested directly from trees, wood residues and byproducts from mill processing, and wood-related and paper-related refuse. The average price of *biomass total* is computed as the sum of the dollar expenditures for those four components divided by the sum of the Btu quantities purchased of those four components. The *biomass total* does not include pulping liquor or black liquor.

* Estimate less than 0.5

Data Source: U.S. Energy Information Administration, Office of Energy Demand & Integrated Statistics, Form EIA-846, *2022 Manufacturing Energy Consumption Survey*.

Note: Totals may not equal sum of components because of independent rounding. Zeroes do not mean that the energy source is free but that the energy source neither showed up in this sample nor was purchased at all in the same sampled population.

[a] The Bureau of the Census classifies establishments using the 2022 North American Industry Classification System (NAICS).

[b] A *local utility* is an entity that produces and/or delivers a particular energy source (for example, electricity, natural gas, steam) and is legally obligated to provide service to the public within its franchise area.

[c] *Sources other than local utility* include independent producers, brokers, marketers, and marketing subsidiaries of utilities; for the case of electricity sources, also include small power producers and co-generators not located at the establishment site.

[d] Hydrocarbon gas liquids (HGLs) include ethane, ethylene, propane, propylene, normal butane, butylene, ethane-propane mixtures, propane-butane mixtures, and isobutane produced at refineries or natural gas processing plants, including plants that fractionate raw natural gas liquids.

[e] Four components of *biomass* are collected: agricultural waste, wood harvested directly from trees, wood residues and byproducts from mill processing, and wood-related and paper-related refuse. The average price of *biomass total* is computed as the sum of the dollar expenditures for those four components divided by the sum of the Btu quantities purchased of those four components. The *biomass total* does not include pulping liquor or black liquor.

* Estimate less than 0.5

D=Withheld to avoid disclosing data for individual establishments

Q=Withheld because relative standard error (RSE) is greater than 50%

NA=Not available

X=Not defined because RSE corresponds to a data table value of zero
