$\text{b (real 2010 dollars, monthly average)}$
Crude oil prices are the primary driver of petroleum product prices

Sources: EIA Short Term Energy Outlook, Refinitiv
Economic growth has a strong impact on oil consumption

% change (year-on-year)

Sources: U.S. Energy Information Administration, Oxford Economics
Changes in expectations of economic growth can affect oil prices

Note: Starting in January of each year, each line shows the expected forecast of GDP growth for the specified calendar year, which tends to move toward the actual realized growth outcome as the year progresses. Expectations continue to evolve into the next calendar year as revised GDP data become available (e.g., 2008 GDP expectations are revised even during 2009).

Source: Oxford Economics
In OECD countries, price increases have coincided with lower consumption

Sources: EIA Short Term Energy Outlook, Refinitiv
Rising oil prices held down global oil consumption growth from 2005-2008, despite high economic growth.

Sources: EIA Short Term Energy Outlook, Refinitiv
Changes in non-OPEC production can affect oil prices

Sources: EIA Short Term Energy Outlook, Refinitiv
Non-OPEC supply expectations indicate changes in market sentiment concerning oil supply.

Note: Starting in January of each year, each line shows the expected forecast of non-OPEC supply for the specified calendar year, which tends to move toward the actual realized supply outcome as the year progresses.

Changes in Saudi Arabia crude oil production can affect oil prices

Sources: U.S. Energy Information Administration, Refinitiv
Unplanned supply disruptions tighten world oil markets and push prices higher

Sources: U.S. Energy Information Administration
During 2003-2008, OPEC’s spare production levels were low, limiting its ability to respond to demand and price increases.

Sources: EIA Short Term Energy Outlook, Refinitiv
The years 2003-2008 experienced periods of very strong economic and oil demand growth, slow supply growth and tight spare capacity.
