Crude oil prices are the primary driver of petroleum product prices

Source: Short-Term Energy Outlook
Economic growth has a strong impact on oil consumption

Sources: U.S. Energy Information Administration, Oxford Economics
Changes in expectations of economic growth can affect oil prices

Note: Starting in January of each year, each line shows the expected forecast of GDP growth for the specified calendar year, which tends to move toward the actual realized growth outcome as the year progresses. Expectations continue to evolve into the next calendar year as revised GDP data become available (e.g., 2021 GDP expectations are revised even during 2022).

June 7, 2022
Changes in non-OPEC production can affect oil prices

Source: Short-Term Energy Outlook
Non-OPEC supply expectations indicate changes in market sentiment concerning oil supply

Source: Short-Term Energy Outlook

Note: Starting in January of each year, each line shows the expected forecast of non-OPEC supply for the specified calendar year, which tends to move toward the actual realized supply outcome as the year progresses.
Changes in Saudi Arabia crude oil production can affect oil prices

Sources: U.S. Energy Information Administration, Refinitiv An LSEG Business
Unplanned supply disruptions tighten world oil markets and push prices higher

Sources: U.S. Energy Information Administration
During 2003-2008, OPEC’s spare production levels were low, limiting its ability to respond to demand and price increases.

Source: Short-Term Energy Outlook
The years 2003-2008 experienced periods of very strong economic and oil demand growth, slow supply growth and tight spare capacity.
