Notes:

- Marketed production from U.S. Federal leases in the Gulf of Mexico.
- The balancing item represents the difference between the sum of the components of natural gas supply and the sum of components of natural gas demand.
- Natural gas used for electricity generation and (a limited amount of) useful thermal output by electric utilities and independent power producers.
- A list of States in each inventory region refer to the Weekly Natural Gas Storage Report, Notes and Definitions (http://www.eia.gov/ngs/note.html).

LNG: liquefied natural gas.

**Historical data:** Latest data available from Energy Information Administration databases supporting the following reports: Natural Gas Monthly, DOE/EIA-0130, and Electric Power Monthly, DOE/EIA-0226.

Minor discrepancies with published historical data are due to independent rounding.

**Projections:** EIA Regional Short-Term Energy Model.
