The seven regions analyzed in this report accounted for 95% of domestic oil production growth and all domestic natural gas production growth during 2011-13.

Drilling Productivity Report

August 2015
**Utica Region**

**Drilling Productivity Report**

**August 2015**

- **Oil**
  - 281 barrels/day
  - +10 barrels/day month over month

- **Gas**
  - 7,061 thousand cubic feet/day
  - +185 thousand cubic feet/day month over month

**Monthly additions from one average rig**
- September: 7,246 barrels/day
- August: 7,061 thousand cubic feet/day

**New-well oil production per rig**
- Utica Region: 1,200 barrels/day
- Rig count: 6

**Legacy oil production change**
- Utica Region: thousand barrels/day
- Rig count: 3

**Indicated change in oil production (Sep vs. Aug)**
- Utica Region: thousand barrels/day
- New-well oil production per rig: 1,200 barrels/day
- Legacy production change: 0
- Net change: +2 barrels/day
- Oil: +10 barrels/day month over month

**Natural gas production**
- Utica Region: million cubic feet/day
- New-well gas production per rig: 7,200 thousand cubic feet/day
- Legacy gas production change: 0
- Net change: 6,000 thousand cubic feet/day
- Gas: +185 thousand cubic feet/day month over month

**Projected production through September**

**New-well gas production per rig**
- Utica Region: thousand cubic feet/day
- Rig count: 35

**Indicated change in natural gas production (Sep vs. Aug)**
- Utica Region: million cubic feet/day
- New-well gas production per rig: 7,200 thousand cubic feet/day
- Legacy production change: 0
- Net change: +52 million cubic feet/day
- Gas: +185 thousand cubic feet/day month over month

**Rig count**
- Utica Region: 35
- New-well oil production per rig: 1,200 barrels/day
- Legacy oil production change: 0
- Net change: +2 barrels/day
- Oil: +10 barrels/day month over month

**Natural gas production**
- Utica Region: million cubic feet/day
- New-well gas production per rig: 7,200 thousand cubic feet/day
- Legacy gas production change: 0
- Net change: +52 million cubic feet/day
- Gas: +185 thousand cubic feet/day month over month
The Drilling Productivity Report uses recent data on the total number of drilling rigs in operation along with estimates of drilling productivity and estimated changes in production from existing oil and natural gas wells to provide estimated changes in oil\(^1\) and natural gas\(^2\) production for seven key regions. EIA’s approach does not distinguish between oil-directed rigs and gas-directed rigs because once a well is completed it may produce both oil and gas; more than half of the wells do that.

**Monthly additions from one average rig**

Monthly additions from one average rig represent EIA’s estimate of an average rig’s\(^3\) contribution to production of oil and natural gas from new wells.\(^4\) The estimation of new-well production per rig uses several months of recent historical data on total production from new wells for each field divided by the region’s monthly rig count, lagged by two months.\(^5\) Current- and next-month values are listed on the top header. The month-over-month change is listed alongside, with +/- signs and color-coded arrows to highlight the growth or decline in oil (brown) or natural gas (blue).

**New-well oil/gas production per rig**

Charts present historical estimated monthly additions from one average rig coupled with the number of total drilling rigs as reported by Baker Hughes.

**Legacy oil and natural gas production change**

Charts present EIA’s estimates of total oil and gas production changes from all the wells other than the new wells. The trend is dominated by the well depletion rates, but other circumstances can influence the direction of the change. For example, well freeze-offs or hurricanes can cause production to significantly decline in any given month, resulting in a production increase the next month when production simply returns to normal levels.

**Projected change in monthly oil/gas production**

Charts present the combined effects of new-well production and changes to legacy production. Total new-well production is offset by the anticipated change in legacy production to derive the net change in production. The estimated change in production does not reflect external circumstances that can affect the actual rates, such as infrastructure constraints, bad weather, or shut-ins based on environmental or economic issues.

**Oil/gas production**

Charts present all oil and natural gas production from both new and legacy wells since 2007. This production is based on all wells reported to the state oil and gas agencies. Where state data are not immediately available, EIA estimates the production based on estimated changes in new-well oil/gas production and the corresponding legacy change.

**Footnotes:**
1. Oil production represents both crude and condensate production from all formations in the region. Production is not limited to tight formations. The regions are defined by all selected counties, which include areas outside of tight oil formations.
2. Gas production represents gross (before processing) gas production from all formations in the region. Production is not limited to shale formations. The regions are defined by all selected counties, which include areas outside of shale formations.
3. The monthly average rig count used in this report is calculated from weekly data on total oil and gas rigs reported by Baker Hughes.
4. A new well is defined as one that began producing for the first time in the previous month. Each well belongs to the new-well category for only one month. Reworked and recompleted wells are excluded from the calculation.
5. Rig count data lag production data because EIA has observed that the best predictor of the number of new wells beginning production in a given month is the count of rigs in operation two months earlier.
The data used in the preparation of this report come from the following sources. EIA is solely responsible for the analysis, calculations, and conclusions.
