EIA-930 Hurricane Irma Impact Tracking Report
Saturday September 9, 2017, 10:00 hours

For additional information contact:
infoelectric@eia.gov
Electricity demand for the City of Homestead, FL (HST) shows some of the first storm-related effects. Homestead is located on the southeast coast of Florida and would be one of the first U.S. cities and balancing authorities to experience the hurricane.

There are indications of evacuation-related reductions in demand on Friday. The actual demand was well below the forecasted demand.

The demand forecast for Saturday is about one-half of normal demand for the middle of the day. Too early to tell whether actual demand will follow the forecast.

The 8 am today storm track shows the storm moving up the west coast of Florida, making landfall Sunday afternoon and passing over Tampa.

Balancing Authorities and Utility Service Territories in Florida

- TAL: City of Tallahassee
- JEA: Jacksonville Electric Authority
- GVL: Gainesville Regional Utilities
- NSB: City of New Smyrna Beach
