

Appendix B. Data and methodology changes

Tables and data files in the State Energy Data System (SEDS) supply a new year of data each production cycle. The latest data may be preliminary and, therefore, revised the following cycle. Changes made to consumption and price source data for historical years are also regularly incorporated into SEDS.

Listed below are changes in SEDS contents beyond the standard updates.

Electric vehicle charging infrastructure

Select electric vehicle (EV) charging infrastructure data series are now available in SEDS for as early as 2007. The data are for non-single-family residential EV charging locations and ports at the end of the calendar year. New state-level data for the total number of EV charging locations as well as Level 1, Level 2, and DC fast EV charging ports are available back to 2014. New state-level data for the total number of EV charging ports are available back to 2011. New U.S.-level only data for the total number of EV charging locations are available back to 2007. The data are from the U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy Alternative Fuels Data Center (AFDC). For more information, see [Section 1: Energy indicators](#) of the SEDS [energy indicators technical notes](#).
