**Source:** Data sources, estimation procedures, and assumptions are described in the Technical Notes. Web Page: All data are available at https://www.eia.gov/state/seds/seds-data-complete.php.

**Notes:**

a Includes supplemental gaseous fuels that are commingled with natural gas.

b Hydrocarbon gas liquids, assumed to be propane only.

c Beginning in 1995, includes fuel ethanol blended into motor gasoline. There is a discontinuity in the expenditure series between 2014 and 2015 because of changes in consumption estimates from the source. See Consumption Technical Notes, Section 4.

d Includes small amounts of petroleum coke not shown separately.

f, g, h Includes fuel ethanol blended into motor gasoline that is not included in the motor gasoline column.

i For 1981 through 1992, includes fuel ethanol blended into motor gasoline that is not included in the motor gasoline column.

j For 1981 through 1992, includes fuel ethanol blended into motor gasoline that is not included in the motor gasoline column.

k There are no direct fuel costs for hydroelectric, geothermal, solar, or wind energy.

l Includes commercial combined-heat-and-power (CHP) and commercial electricity-only plants.

m In 1998, includes small amounts of electricity consumed by the petroleum products industry.

n Expenditure data are not equal sum of components due to independent rounding. The commercial sector includes commercial combined-heat-and-power (CHP) and commercial electricity-only plants.
