**Power by Wood, wood-derived fuels, and biomass waste. Prior to 2001, includes non-biomass waste.**

1. Biomass HGL Total Other Total

2. Table ET5. Industrial Sector Energy Price and Expenditure Estimates, Selected Years, 1970-2020, Nebraska

4. Includes supplemental gaseous fuels that are combusted with natural gas.

5. Hydrocarbon gas liquids, include natural gas liquids and refinery olefins.

6. Includes gaseous fuel that is intermixed with natural gas.

7. Hydroelectric, geothermal, solar, and wind energy.

8. Fuel ethanol blended into motor gasoline that is not included in the motor gasoline column.

9. Total expenditure includes industrial combined-heat-and-power (CHP) and industrial electricity-only plants. Where shown, R = Revised data and (s) = Value less than 0.05 million dollars. Where shown, — = No consumption, including cases where adjustments were made. See explanation of adjustments in Section 7 of the Technical Notes. Notes: Expenditure totals may not equal sum of components due to independent rounding. The industrial sector includes industrial combined-heat-and-power (CHP) and industrial electricity-only plants.

**Web Page:** All data are available at https://www.eia.gov/state/seds/seds-data-complete.php.

**Sources:** Data sources, estimation procedures, and assumptions are described in the Technical Notes.
