</tbody>
</table>

**Notes:**
- Includes supplemental gaseous fuels that are commingled with natural gas.
- Hydrocarbon gas liquids, include natural gas liquids and refinery off-gas.
- Includes asphalt and road oil, kerosene, lubricants, petroleum coke, and the other petroleum products category. See Technical Notes, Section 4.
- Includes industrial combined-heat-and-power (CHP) and industrial electricity-only plants. The continuity of these data series estimates may be affected by the changing data sources and estimation methodologies. See the Technical Notes for an explanation of changes in methodology.
- kWh = Kilowatthours. - NA = Not available. – Btu = British thermal units.
- Includes a small amount of wind energy consumed by industrial utility-scale facilities.
- Incurred in the generation, transmission, and distribution of electricity plus plant use and unaccounted for electrical system energy losses. Pre-1990 estimates are not comparable to those for later years. See Section 6 of Technical Notes for an explanation of changes in methodology.
- The industrial sector includes industrial combined-heat-and-power (CHP) and industrial electricity-only plants. The continuity of these data series may be affected by the changing data sources and estimation methodologies. See the Technical Notes for each type of energy.
- Where shown, R = Revised data and (s) = Physical unit value less than 0.5 or Btu value less than 0.05.
- Notes: All values are not equal sum of components due to rounding and independent estimation. The industrial sector includes industrial combined-heat-and-power (CHP) and industrial electricity-only plants. The continuity of these data series estimates may be affected by the changing data sources and estimation methodologies. See the Technical Notes for each type of energy.

**Sources:**
- Data sources, estimation procedures, and assumptions are described in the Technical Notes.
- Technical Notes, Section 4.

**Technical Notes:**
- Includes gaseous fuel emissions from the production of biodiesel and diesel fuel.
- Includes all industrial gaseous fuel emissions from the production of non-biogas and non-biomass waste.
- Includes gaseous fuel emissions from industrial processes.
- Includes gaseous fuel emissions from the production of solar energy and combined heat and power (CHP) generation.
- Includes gaseous fuel emissions from industrial processes.
- Includes gaseous fuel emissions from the production of solar energy and combined heat and power (CHP) generation.
- Includes gaseous fuel emissions from industrial processes.
- Includes gaseous fuel emissions from the production of solar energy and combined heat and power (CHP) generation.
- Includes gaseous fuel emissions from industrial processes.
- Includes gaseous fuel emissions from the production of solar energy and combined heat and power (CHP) generation.
- Includes gaseous fuel emissions from industrial processes.
- Includes gaseous fuel emissions from the production of solar energy and combined heat and power (CHP) generation.
- Includes gaseous fuel emissions from industrial processes.
- Includes gaseous fuel emissions from the production of solar energy and combined heat and power (CHP) generation.
- Includes gaseous fuel emissions from industrial processes.
- Includes gaseous fuel emissions from the production of solar energy and combined heat and power (CHP) generation.
- Includes gaseous fuel emissions from industrial processes.
- Includes gaseous fuel emissions from the production of solar energy and combined heat and power (CHP) generation.
- Includes gaseous fuel emissions from industrial processes.
- Includes gaseous fuel emissions from the production of solar energy and combined heat and power (CHP) generation.
- Includes gaseous fuel emissions from industrial processes.
- Includes gaseous fuel emissions from the production of solar energy and combined heat and power (CHP) generation.
- Includes gaseous fuel emissions from industrial processes.
- Includes gaseous fuel emissions from the production of solar energy and combined heat and power (CHP) generation.
- Includes gaseous fuel emissions from industrial processes.
