2009	3.44	7.32	.94	.11	.31	12.12	7.19	1.12	8.31	5.80	2.33	.45	.06	8.64	.17	29.24

¹ Natural gas production, processing, and distribution; processing is not included in 1980 and is incompletely covered in 1981–1989.

² Petroleum production, refining, and distribution.

³ Emissions from passenger cars, trucks, buses, motorcycles, and other transport.

⁴ Consumption of coal, petroleum, natural gas, and wood for heat or electricity.

⁵ See notes on components for specific coverage, which is inconsistent prior to 1990 in some cases.

⁶ 1980–1983, domestic wastewater only; 1984 forward, industrial and domestic wastewater.

⁷ Methane emitted as a product of digestion in animals such as cattle, sheep, goats, and swine.

⁸ Estimation methods for 1990 forward reflect a shift in waste management away from liquid systems to dry-lot systems, thus lowering emissions.

⁹ Chemical production, and iron and steel production.

NA=Not available.

Notes: • Data for this table are not available for 2010. • Emissions are from anthropogenic sources.

"Anthropogenic" means produced as the result of human activities, including emissions from agricultural activity and domestic livestock. Emissions from natural sources, such as wetlands and wild animals, are not included. • Under certain conditions, methane may be produced via anaerobic decomposition of organic materials in landfills, animal wastes, and rice paddies. • Totals may not equal sum of components due to independent rounding.
