

U.S. energy consumption by source and sector, 2018

(Quadrillion Btu)

^a Includes electricity net imports, not shown separately.
^b Does not include biofuels that have been blended with petroleum—biofuels are included in “Renewable Energy.”
^c Excludes supplemental gaseous fuels.
^d Includes -0.03 quadrillion Btu of coal coke net imports.
^e Conventional hydroelectric power, geothermal, solar/photovoltaic, wind, and biomass.
^f Electricity-only and combined-heat-and-power (CHP) plants whose primary business is to sell electricity, or electricity and heat, to the public.
^g Calculated as the primary energy consumed by the electric power sector minus the energy content of electricity retail sales. See Note, “Electrical System Losses,” at the

end of U.S. Energy Information Administration (EIA), Monthly Energy Review, Section 2.
^h Includes primary energy consumption plus electricity retail sales. Excludes electrical system energy losses.
ⁱ Includes industrial combined-heat-and-power (CHP) and industrial electricity-only plants.
^j Includes commercial combined-heat-and-power (CHP) and commercial electricity-only plants.
 Note: Sum of components may not equal total due to independent rounding.
 Sources: EIA, Monthly Energy Review (April 2019), Tables 1.3, 1.4a, 1.4b, and 2.1-2.6.
