</table>

\(^a\) Total vegetable oil and other biomass inputs to the production of biodiesel—calculated by multiplying biodiesel production by 5.433 million Btu per barrel. See "Biodiesel Feedstock" entry in the "Thermal Conversion Factor Source Documentation" at the end of Appendix A.

\(^b\) Losses and co-products from the production of biodiesel. Does not include natural gas, electricity, and other non-biomass energy used in the production of biodiesel—these are included in the industrial sector consumption statistics for the appropriate energy source.

\(^c\) Net imports equal imports minus exports.

\(^d\) Stocks are at end of period. Includes biodiesel stocks at (or in) refineries, pipelines, and bulk terminals. Beginning in 2011, also includes stocks at biodiesel production plants.

\(^e\) A negative value indicates a decrease in stocks and a positive value indicates an increase.

\(^f\) Other renewable diesel fuel and other renewable fuels consumption. See "Renewable Diesel Fuel (Other)" and "Renewable Fuels (Other)" in Glossary.

\(^g\) In 2009, because incomplete data coverage and differing data sources, a "Balancing Item" amount of 733 thousand barrels (653 thousand barrels in January 2009; 80 thousand barrels in February 2009) is used to balance biodiesel supply and disposition.

\(^h\) Derived from the final 2010 stocks value for bulk terminals and biodiesel production plants (977 thousand barrels), not the final 2010 value for bulk terminals only (672 thousand barrels) that is shown under "Stocks."

\(^i\) Derived from the preliminary 2018 stocks value (4,684 thousand barrels) that is shown under "Stocks."

\(^j\) NA=Not available. – =No data reported. (s)=Less than 0.5 trillion Btu and greater than −0.5 trillion Btu, or less than 500 barrels and greater than −500 barrels. Notes: TBlu = thousand barrels. MMgal = million U.S. gallons. TBtu = trillion Btu.
