\(^a\) Metric tons of carbon dioxide can be converted to metric tons of carbon equivalent by multiplying by 12/44.  
\(^b\) Natural gas, excluding supplemental gaseous fuels.  
\(^c\) Distillate fuel oil, excluding biodiesel.  

Monthly Information (Excel and CSV files) for all available annual and monthly data beginning in 1973.  

Notes:  
• Data are estimates for carbon dioxide emissions from energy consumption, plus the relatively small amount of emissions from the non-combustion use of fossil fuels. See "Section 11 Methodology and Sources" at end of section.  
• See "Carbon Dioxide" in Glossary.  
• See Note 1, "Emissions of Carbon Dioxide and Other Greenhouse Gases," at end of section.  
• Data exclude emissions from biomass energy consumption. See Table 11.7 and Note 2, "Accounting for Carbon Dioxide Emissions From Biomass Energy Combustion," at end of section.  
• Totals may not equal sum of components due to independent rounding.  
• Geographic coverage is the 50 states and the District of Columbia.
