1. Total losses are calculated as the primary energy consumed by the electric power sector minus the energy content of electricity retail sales. Total losses are allocated to the end-use sectors in proportion to each sector's share of total electricity retail sales. See Note 1, "Electrical System Energy Losses," at end of section.

2. See "Primary Energy Consumption" in Glossary.

3. See Table 10.2b for notes on series components.

4. Natural gas only; does not include supplemental gaseous fuels—see Note 3, "Supplemental Gaseous Fuels," at end of Section 4. Data are for natural gas consumed in the operation of pipelines (primarily in compressors) and small amounts consumed as vehicle fuel—see Table 4.3. Includes non-combustion use of lubricants.

5. Electricity retail sales to ultimate customers reported by electric utilities and, in 1996, other energy service providers.

6. Geographic coverage is the 50 states and the District of Columbia.

7. Renewable Energy Data and Surveys, at end of section. Totals may not equal sum of components due to independent rounding.

8. See Note 4, "Other Energy Losses," at end of section. Totals may not be equal sum of components due to independent rounding.

9. Data are estimates, except for coal totals through 1977; and electricity retail sales beginning in 1979. See Note 2, "Other Energy Losses," at end of section.

10. See Note 3, "Energy Consumption Data and Surveys," at end of section. Geographic coverage is the 50 states and the District of Columbia.

12. Sources: See end of section.
