### Notes:
- **a** See "Primary Energy Consumption" in Glossary.
- **b** See Table 10.2b for notes on series components.
- **c** Natural gas only; does not include supplemental gaseous fuels—see Note 3, "Supplemental Gaseous Fuels," at end of Section 4. Data are for natural gas consumed in the operation of pipelines (primarily in compressors) and small amounts consumed as vehicle fuel—see Table 4.3.
- **d** Does not include biolubricants. Biolubricants are included in "Biomass." Includes non-combustion use of lubricants.
- **e** Electric retail sales to ultimate customers reported by electricity utilities and, beginning in 1996, other energy service providers.
- **f** Total losses are calculated as the primary energy consumed by the electric power sector minus the energy content of electricity retail sales. Total losses are allocated to the end-use sectors in proportion to each sector’s share of total electricity retail sales. See Note 1, "Electrical System Energy Losses," at end of section.
- **g** Beginning in 1978, the small amounts of coal consumed for transportation are reported as industrial sector consumption.
- **R** Revised. NA = Not available.
