---

The table details the electricity generation, trade, and end use for both electric and commercial sectors, with specific data for different months and years. The data are presented in kilowatthours (kWh), a common unit for measuring electrical energy. The table includes subcategories for electric utilities and independent power producers, with detailed figures for each sector for various months and years, reflecting the electricity production, trade, and consumption trends over time. The data are useful for understanding the energy sector’s dynamics and planning. 

---

**Notes:**  
1. Use of electricity that is 1) self-generated, 2) produced by either the same entity that consumes the power or an affiliate, and 3) used in direct support of a service or industrial process located within the same facility or group of facilities that house the generating equipment. Direct use is exclusive of transmission and distribution use. 
2. NA=Not available. F=Forecast. (s)=Less than 0.5 billion kilowatthours.
