</table>

**Table 9.9: Cost of Fossil-Fuel Receipts at Electric Generating Plants** (Dollars per Million Btu, Including Taxes)

**Notes:**
- Receipts are purchases of fuel.
- Yearly costs are averages of monthly values, weighted by quantities in Btu.
- For this table, there are several breaks in the data series related to what plants and fuels are covered. Beginning in 2013, data cover all regulated generating plants; plus unregulated plants whose total fossil-fueled nameplate generating capacity is 50 megawatts or more for coal, and 200 megawatts or more for natural gas, residual fuel oil, distillate fuel oil, and petroleum coke. For data coverage before 2013, see EIA, *Electric Power Monthly*, Appendix C, Form EIA-923 notes, “Receipts and costs and quality of fossil fuels” section. Geographic coverage is the 50 states and the District of Columbia.

**Sources:** See end of section.
