Administration

2014 Domestic Uranium Production Report

April 2015

This report was prepared by the U.S. Energy Information Administration (EIA), the statistical and analytical agency within the U.S. Department of Energy. By law, EIA's data, analyses, and forecasts are independent of approval by any other officer or employee of the United States Government. The views in this report therefore should not be construed as representing those of the U.S. Department of Energy or other federal agencies.

Contacts

This report was prepared by the staff of the Power and Uranium Operations Team, Office of Electricity, Renewables, and Uranium Statistics. Questions about the preparation and content of this report may be directed to InfoNuclearData@eia.gov.

Preface

The U.S. Energy Information Administration (EIA) reports detailed data spanning 2003 through 2014 and summary data back to 1993 on U.S. uranium production activities in this report, 2014 Domestic Uranium Production Report.

Data in this report are based primarily on information reported on Form EIA-851A, “Domestic Uranium Production Report (Annual)” and some information reported on Form EIA-858, “Uranium Marketing Annual Survey.” Form EIA-851A survey collects data on uranium milling and in-situ-leach processing, feed sources, mining, employment, drilling, expenditures, and reserve estimates. Form EIA-858 survey includes data collected on contracts and deliveries.

Prior editions of this report may be found on the EIA website at <http://www.eia.gov/nuclear/reports.cfm>.

Definitions for terms used in this report can be found in EIA’s Energy Glossary: <http://www.eia.doe.gov/glossary/>.

Drilling

Total uranium drilling was 1,752 holes covering 1.3 million feet, 67% fewer holes than in 2013 and the lowest since 2004. Expenditures for uranium drilling in the United States were \$28 million in 2014, a decrease of 43% compared with 2013.

Mining, production, shipments, and sales

U.S. uranium mines produced 4.9 million pounds U_3O_8 in 2014, 7% more than in 2013. Two underground mines produced uranium ore during 2014, one less than during 2013. Uranium ore from underground mines is stockpiled and shipped to a mill, to be milled into uranium concentrate (a yellow or brown powder). Additionally, eight in-situ-leach (ISL) mining operations produced solutions containing uranium in 2014, one more than in 2013, that was processed into uranium concentrate at ISL plants. Overall, there were 10 mines that operated during part or all of 2014.

Total production of U.S. uranium concentrate¹ in 2014 was 4.9 million pounds U_3O_8 , 5% more than in 2013, from eight facilities: one mill in Utah (White Mesa Mill) and seven ISL plants (Alta Mesa Project, Crow Butte Operation, Hobson ISR Plant/La Palangana, Lost Creek Project, Nichols Ranch ISR Project, Smith Ranch-Highland Operation, and Willow Creek Project). The Nichols Ranch ISR Project started producing in 2014. The seven ISL plants are located in Nebraska, Texas and Wyoming.

Total shipments of uranium concentrate from U.S. mill and ISL plants were 4.6 million pounds U_3O_8 in 2014, 1% less than in 2013. U.S. producers sold 4.7 million pounds U_3O_8 of uranium concentrate in 2014 at a weighted-average price of \$39.17 per pound U_3O_8 .

Facility status (mills and in-situ-leach plants)

At the end of 2014, the White Mesa Mill in Utah was operating-processing alternate feed with a capacity of 2,000 short tons of ore per day. Shootaring Canyon Uranium Mill in Utah and Sweetwater Uranium Project in Wyoming were on standby with a total capacity of 3,750 short tons of ore per day. There is one mill planned for Colorado (Pinon Ridge Mill) and one heap leach plant planned for Wyoming (Sheep Mountain).

At the end of 2014, seven U.S. uranium ISL plants were operating with a combined capacity of 15.3 million pounds U_3O_8 per year (Crow Butte Operation in Nebraska; Alta Mesa Project and Hobson ISR Plant/La Palangana in Texas; Lost Creek Project, Nichols Ranch ISR Project, Smith Ranch-Highland Operation, and Willow Creek Project in Wyoming). The Ross Central Processing Plant was under construction in Wyoming. There are seven ISL plants planned in New Mexico, South Dakota, Texas, and Wyoming.

¹ A yellow or brown powder obtained by the milling of uranium ore, processing of in situ leach mining solutions, or as a byproduct of phosphoric acid production.

Employment

Total employment in the U.S. uranium production industry was 787 person-years in 2014, a decrease of 32% from the 2013 total and the lowest since 2006. Exploration employment was 86 person-years, a 42% decrease compared with 2013. Mining employment was 246 person-years, and decreased 37% from 2013. Milling and processing employment was 293 person-years, a 30% decrease from 2013. Reclamation employment decreased 19% to 161 person-years from 2013 to 2014. Uranium production industry employment for 2014 was in 9 States: Arizona, Colorado, Nebraska, New Mexico, Oregon, Texas, Utah, Washington, and Wyoming.

Expenditures

Total expenditures for land, exploration, drilling, production, and reclamation were \$240 million in 2014, 22% less than in 2013. Expenditures for U.S. uranium production, including facility expenses, were the largest category of expenditures at \$138 million in 2014 and were down by 18% from the 2013 level. Uranium exploration expenditures were \$11 million and decreased 50% from 2013 to 2014. Expenditures for land were \$12 million in 2014, a 21% decrease compared with 2013. Reclamation expenditures were \$52 million, a 5% decrease compared with 2013.

Reserve estimates

For end of 2014, estimated uranium reserves were 45 million pounds U_3O_8 at a maximum forward cost of up to \$30 per pound. At up to \$50 per pound, estimated reserves were 163 million pounds U_3O_8 . At up to \$100 per pound, estimated reserves were 359 million pounds U_3O_8 . At the end of 2014, estimated uranium reserves for mines in production were 19 million pounds U_3O_8 at a maximum forward cost of up to \$50 per pound. Estimated reserves for properties in development drilling and under development for production were 38 million pounds U_3O_8 at a maximum forward cost of up to \$50 per pound.

The uranium reserve estimates presented here cannot be compared with the much larger historical data set of uranium reserves published in the July 2010 report [U.S. Uranium Reserves Estimates](#). Those reserve estimates were made by EIA based on data collected by EIA and data developed by the National Uranium Resource Evaluation (NURE) program, operated out of Grand Junction, Colorado, by DOE and predecessor organizations. The EIA data covered approximately 200 uranium properties with reserve estimates, collected from 1984 through 2002. The NURE data covered approximately 800 uranium properties with reserve estimates, developed from 1974 through 1983. Although the 2014 data collected by the Form EIA-851A survey covers a much smaller set of properties than the earlier EIA data and NURE data, EIA believes that within its scope the EIA-851A data provides more reliable estimates of the uranium recoverable at the specified forward cost than estimates derived from 1974 through 2002. In particular, this is because the NURE data has not been comprehensively updated in many years and is no longer a current data source.

Table 1. U.S. uranium drilling activities, 2003-14

Year	Exploration Drilling		Development Drilling		Exploration and Development Drilling	
	Number of Holes	Feet (thousand)	Number of Holes	Feet (thousand)	Number of Holes	Feet (thousand)

Total Capacity:			6,975					

- = No data reported.

¹ Heap leach solutions: The separation, or dissolving-out from mined rock, of the soluble uranium constituents by the natural action of percolating a prepared chemical solution through mounded (heaped) rock material. The mounded material usually contains low grade mineralized material and/or waste rock produced from open pit or underground mines. The solutions are collected after percolation is completed and processed to recover the valued components.

Notes: Capacity for 2014. An operating status of "Operating" indicates the mill usually was producing uranium concentrate at the end of the period.

Total Production Capacity:			24,975,000					

- = No data reported.

Notes: Production capacity for 2014. An operating status of "Operating" indicates the in-situ-leach plant usually was producing uranium concentrate at the end of the period. Hobson ISR Plant processed uranium concentrate that came from La Palangana. Hobson and La Palangana are part of the same project. ISR stands for in-situ recovery. Christensen Ranch and Irigaray are part of the Willow Creek Project. Uranerz Energy has a tolling arrangement with Cameco Resources. Uranium is first processed at the Nichols Ranch plant and then transported to the Smith Ranch-Highland Operation plant for final processing into Uranerz's uranium concentrate. CPP stands for central processing plant.

Table 9. Summary production statistics of the U.S. uranium industry, 1993-2014

Year	Exploration and Development Surface Drilling (million feet)	Exploration and Development Drilling Expenditures ¹ (million dollars)	Mine Production of Uranium (million pounds U₃O₈)	Uranium Concentrate Production (million pounds U₃O₈)	Uranium Concentrate Shipments (million pounds U₃O₈)	Employment (person-years)
1993	1.1	5.7	2.1	3.1	3.4	871
1994	0.7	1.1	2.5	3.4	6.3	980
1995	1.3	2.6	3.5	6.0	5.5	1,107
1996	3.0	7.2	4.7	6.3	6.0	1,118
1997	4.9	20.0	4.7	5.6	5.8	1,097
1998	4.6	18.1	4.8	4.7	4.9	1,120
1999	2.5	7.9	4.5	4.6	5.5	848
2000	1.0	5.6	3.1	4.0	3.2	627
2001	0.7	2.7	2.6	2.6	2.2	423
2002	W	W	2.4	2.3	3.8	426
E2003	W	W	2.2	2.0	1.6	321
2004	1.2	10.6	2.5	2.3	2.3	420
2005	1.7	18.1	3.0	2.7	2.7	648
2006	2.7	40.1	4.7	4.1	3.8	755
2007	5.1	67.5	4.5	4.5	4.0	1,231
2008	5.1	81.9	3.9	3.9	4.1	1,563
2009	3.7	35.4	4.1	3.7	3.6	1,096
2010	4.9	44.6	4.2	4.2	5.1	1,073
2011	6.3	53.6	4.1	4.0	4.0	1,191
2012	7.2	66.6	4.3	4.1	3.9	1,196
2013	3.8	49.9	4.6	4.7	4.7	1,156
2014	1.3	28.2	4.9	4.9	4.6	787

¹ Expenditures are in nominal U.S. dollars.

E = Estimated data, except for employment.

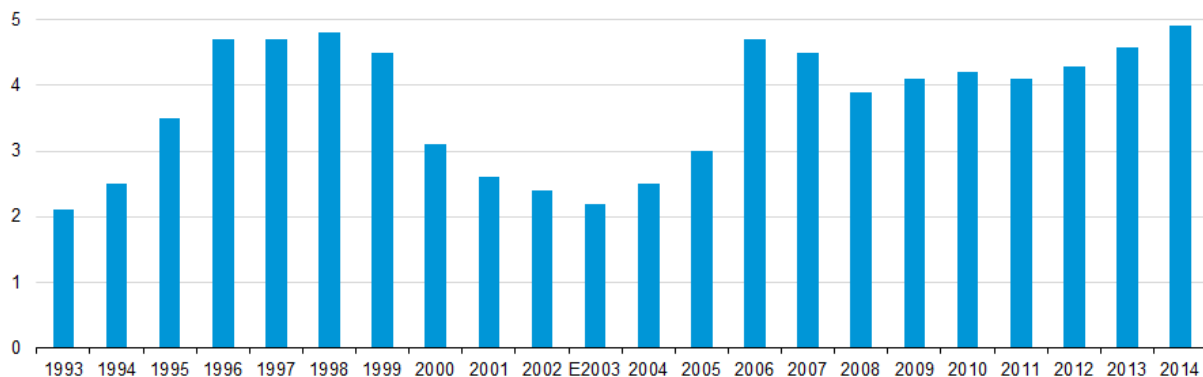

W = Data withheld to avoid disclosure of individual company data.

Note: The 2003 annual production and shipment amounts were estimated by rounding to the nearest 200,000 pounds to avoid disclosure of individual company data.

Table 10. Uranium reserve estimates at the end of 2013 and 2014

million pounds U₃O₈

Uranium Reserve Estimates ¹ by Mine and Property Status, Mining Method, and State(s)	End of 2013			End of 2014		
	Forward Cost ²					
	\$0 to \$30 per pound	\$0 to \$50 per pound	\$0 to \$100 per pound	\$0 to \$30 per pound	\$0 to \$50 per pound	\$0 to \$100 per pound
Properties with Exploration Completed, Exploration Continuing, and Only Assessment Work	W	W	130.7	W	W	154.6
Properties Under Development for Production and Development Drilling	W	31.8	W	W	38.2	W
Mines in Production	W	19.6	W	W	19.2	W
Mines Closed Temporarily, Closed Permanently, and Mined Out	W	W	135.2	W	W	W
Total	46.6	W	337.6	45.3	163.5	359.3
In-Situ Leach Mining	W	W	124.1	W	W	150.8
Underground and Open Pit Mining	W	W	213.5	W	W	208.5
Total	46.6	W	337.6	45.3	163.5	359.3
Arizona, New Mexico and Utah	0	W	189.1	0	W	212.3
Colorado, Nebraska and Texas	W	W	40.6	W	W	40.3
Wyoming	W	W	107.9	W	W	106.8
Total	46.6	W	337.6	45.3	163.5	359.3

W = Data withheld to avoid disclosure of individual company data.

¹ Reserve estimates on 74 mines and properties for end of 2013 and on 75 mines and properties for end of 2014. These uranium reserve estimates cannot be compared with the much larger historical data set of uranium reserves that were published in the July 2010 report U.S. Uranium Reserves Estimates at <http://www.eia.gov/cneaf/nuclear/page/reserves/ures.html>. Reserves, as reported here, do not necessarily imply compliance with U.S. or Canadian government definitions for purposes of investment disclosure.

² Forward Cost: The operating and capital costs still to be incurred in the production of uranium from in-place reserves. By using forward costing, estimates for reserves for ore deposits in differing geological settings and status of development can be aggregated and reported for selected cost categories. Included are costs for labor, materials, power and fuel, royalties, payroll taxes, insurance, and applicable general and administrative costs. Excluded from forward cost estimates are prior expenditures, if any, incurred for property acquisition, exploration, mine development, and mill construction, as well as income taxes, profit, and the cost of money. Forward costs are neither the full costs of production nor the market price at which the uranium, when produced, might be sold.

Note: Totals may not equal sum of components because of independent rounding.
