

**Table 3. U.S. uranium mills and heap leach facilities by owner, location, capacity, and operating status**

Owner	Mill and heap leach <sup>1</sup> facility name	County, state (existing and planned locations)	Capacity (short tons of ore per day)	Operating status at end of				
				2022	First-quarter 2023	Second-quarter 2023	Third-quarter 2023	Fourth-quarter 2023
Anfield Resources Inc.	Shootaring Canyon Uranium Mill	Garfield, Utah	750	standby	standby	-	-	-
EFR White Mesa LLC	White Mesa Mill	San Juan, Utah	2,000	operating	operating	-	-	-
Energy Fuels Wyoming Inc	Sheep Mountain	Fremont, Wyoming	725	undeveloped	undeveloped	-	-	-
Kennecott Uranium Company/Wyoming Coal Resource Company	Sweetwater Uranium Project	Sweetwater, Wyoming	3,000	standby	standby	-	-	-
<b>Total capacity</b>			<b>6,475</b>					

<sup>1</sup> Heap leach solutions: The separation, or dissolving-out from mined rock, of the soluble uranium constituents by the natural action of percolating a prepared chemical solution through mounded (heaped) rock material. The mounded material usually contains low-grade mineralized material and/or waste rock produced from open pit or underground mines. The solutions are collected after percolation is completed, and the solutions are processed to recover the valued components.

- = No data reported

Notes: Capacity for the first-quarter of 2023. An operating status of *operating* indicates the mill usually was producing uranium concentrate at the end of the period.
